Submission handoff

Team product | Dipanshu Raj | IIT Kanpur

1. Review and run the project

Extract the ZIP. On Windows, install Python 3.12 and open start_windows.bat. Check the dashboard, the presentation and the measured results. The final repository should contain the project contents, not only the ZIP.

2. Upload the supplied demo video

Upload GlucoTwin_Demo_20min.mp4 to your YouTube account as Unlisted. Review the final playback and confirm 20:00 duration. The prepared narration is synthesized; an editable script and captions are supplied if you prefer to record your own voice.

3. Add the real URLs

Run scripts/finalize_submission.py with the actual YouTube and public GitHub repository URLs. It updates README.md. Never leave the pending-video notice in the submitted README. Then run scripts/check_submission.py.

4. Publish and verify

Use a Public repository under Dipanshur19. Preserve the required local project folder name: Team product_IIT Kanpur. Open the repository and video in a signed-out browser. Ensure the README links to the deck, architecture PDF, technical report and video.

5. Submit on Unstop

Paste the public repository URL. Mark all mandatory checkboxes only when the corresponding item is actually present. Supply the team leader contact details if asked. The listed deadline is 24 October 2026, 7:00 PM IST. Keep the platform confirmation.

Current completion boundary

Creating these files does not upload the video, create a public repository, or submit the Unstop form. A real unlisted video URL is still required. The package includes a checker that flags that omission rather than inventing a link.
